Sales & Growth Proposal

More bookings. Better rate. Channels you own.

WHAT THIS IS

A commercial layer on top of your existing operation: pricing, distribution, agents, brand and direct demand. Your team keeps running the property.

PREPARED FOR

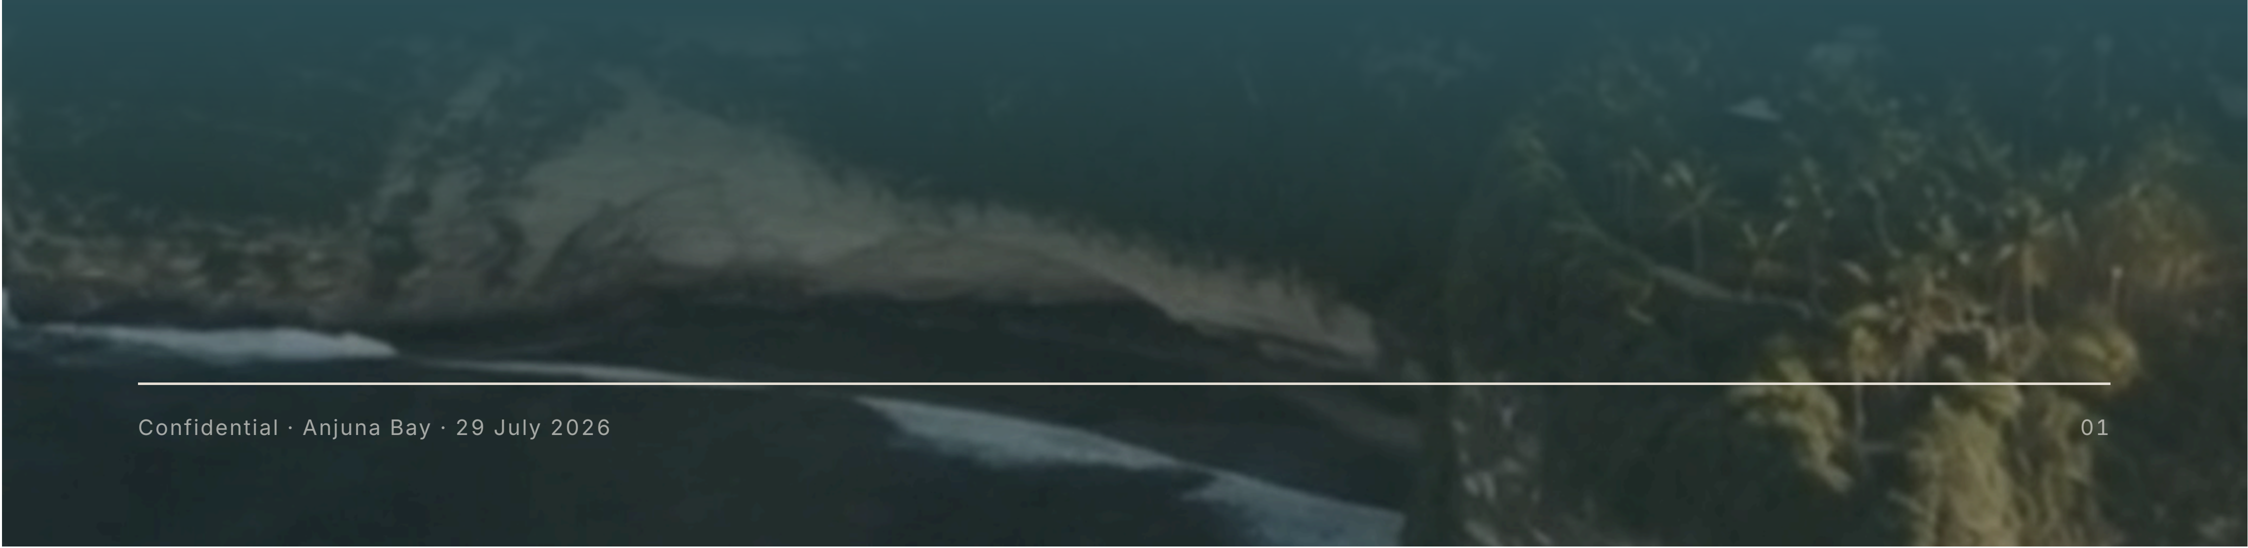
Owner / Developer of Anjuna Bay

PREPARED BY

Fadjri D. Roesman, CSMH — sales & distribution
Selena Nigmatullaeva — brand & digital systems

TO CONFIRM BEFORE MEETING

Owner name · phone · business email



THIS MORNING

We audited your live rates before writing a single slide.

Public data only. No access to your systems, no assumptions, nothing you cannot check yourself in a minute.

4	8	420+	0
units opened 1BR · 2BR · 3BR across both channels	months forward August 2026 to March 2027	dates recorded rate and availability, night by night	access required everything below is public

FOUR THINGS CAME OUT OF IT

01	Your rate barely moves	Dynamic pricing exists on this property — and runs for about one week a year.
02	The season curve is almost flat	August and February are 27% apart. In Uluwatu that gap is normally 50–80%.
03	Airbnb produces nothing	Eight months forward, not one booking, while Booking.com carries bookings.
04	A two-night minimum quietly kills nights	Single free nights between bookings cannot be sold at all.

FINDING 01 · RATE ARCHITECTURE

Dynamic pricing works here. It runs one week a year.

This is not a missing capability. Someone on your team already knows how to do it.

WHAT WORKS · DECEMBER

+75%

3-bedroom, 9 December: 5.2M
→ 30 December: 9.1M

- The same pattern on the other units: +45% and +97% over New Year.
- Correctly done, and it earns real money.

WHAT DOES NOT · THE OTHER ELEVEN MONTHS

February: 28 consecutive days at one rate.

November 15–21: seven days inside a 2% band.

No weekend premium on any unit we opened — Sunday 15 Nov 3.9M, Wednesday 18 Nov 3.8M.

WHAT THIS IS WORTH

Uluwatu weekends normally carry a material premium. Applying even a modest 15–20% to Friday and Saturday, across roughly nine weekend nights a month, is worth **8–10% of monthly revenue per unit** — with no advertising spend and no new guests.

> You can verify every number on this slide from your phone in under a minute.

Your high season is priced almost like your low season.

Weighted average rate across all 30 villas, taken from the live calendar.

MONTH	SEASON	AVG RATE, ALL UNITS	VS AUGUST
August	High	4.73M	—
September	Shoulder	4.34M	−8%
October	Shoulder	4.07M	−14%
November	Low	3.81M	−19%
December	Mixed	4.19M	−11%
January	Mixed	4.10M	−13%
February	Low	3.72M	−21%

> The mirror image is also true: November and February look expensive for their season — which is exactly where forward demand is thinnest. We would test those months 10% lower midweek and let the response decide, rather than guess.

THE GAP

27%

between your peak and your trough

In Uluwatu the August-to-February spread is normally 50–80%.

AUGUST ALONE

+594M IDR

If the seasonal spread were 50% rather than 27%, August would price at 5.58M. At 75% occupancy across 30 villas that is roughly 594 million rupiah — in one month, from the rate sheet alone.

One of the world's two largest channels is producing nothing.

We opened every Airbnb listing we could find for the property.

BOOKING.COM

Bookings present.

One 2-bedroom villa is largely closed out for August and roughly half taken in September. Forward demand exists and reaches you.

AIRBNB

Every date open. August 2026 to March 2027.

A1, a one-bedroom, and A13, a two-bedroom: not one booked date in eight months. This is not a single weak listing — it is the channel.

THIS IS NOT A DEMAND PROBLEM — IT IS ONE OF THREE FIXABLE THINGS

01

Rates not synced

Availability and pricing drifting apart from Booking, so the listing is never competitive on the day.

02

Guest-side price too high

Airbnb applies fees differently. The same villa can land in front of the guest materially more expensive.

03

Weak listing

Few reviews, thin photography, unit codes for titles — the listing never surfaces in results.

> All three are corrected inside the extranet. None of them costs money.

A two-night minimum is quietly deleting nights.

A sensible rule with one missing exception.

WHAT HAPPENS

When a single free night sits between two bookings, the two-night minimum means it cannot be sold at any price. It simply leaves your inventory.

Across 30 villas with an average stay of three to four nights, these gaps accumulate continuously.

THE FIX

An exception rule: **minimum one night where the gap is one night.** Available in the Booking extranet and in every major channel manager.

Paired with a length-of-stay discount so the released dates actually sell.

WHAT THE FOUR FINDINGS HAVE IN COMMON

> None of them is a demand problem. Not one requires an advertising budget, a new website, or a single additional guest to walk through the door.

All four are corrected inside systems you already pay for — the extranet, the channel manager and the rate sheet. That is where we start, and that is why the first ninety days cost you nothing but attention.

WHAT IT ADDS UP TO

Four findings, one leak.

Modelled at 70% occupancy across 30 villas — 630 nights a month, 2.61 bn IDR gross.

WHERE IT LEAKS	WHAT ACTUALLY HAPPENS	WHAT IT COSTS
1-bedroom rating at 8.1	12 of 30 villas sit outside the 9+ filter, where the 2-bedroom at 9.1 is found	caps occupancy before pricing even matters
Airbnb at zero	A1 and A13 both show no bookings in eight months forward	an entire channel producing nothing
Everything through platforms	20% commission on every single booking	522M IDR a month to the platforms
A rate sheet that does not move	no weekend premium; 27% season spread against a 50–80% market	8–10% of monthly revenue, every month

THE SAME 630 NIGHTS, A DIFFERENT CHANNEL MIX

All through platforms, 20% commission	2.09 bn
55% platform / 25% agent / 20% direct	2.24 bn

+150M a month. 1.8 bn a year. Not one additional booking.

WHY THE ORDER MATTERS

Rating opens visibility. Visibility fills nights. Occupancy earns the right to raise rate. Channel mix keeps more of every rupiah that comes in.

Each step is wasted without the one before it. That is why the website is not first.

> The rating itself is fixed by your operations team, not by us. What we bring is the diagnosis: review analysis with causes, unit by unit, every month.

HONEST BASELINE

What we can see — and what nobody can see from outside.

We would rather show you the limits of our data than present estimates as facts.

ESTABLISHED THIS MORNING

- Published rate by unit type, night by night
- Seasonal curve across eight months forward
- Availability patterns and minimum-stay behaviour
- Presence and performance gaps between channels
- Listing quality: titles, photography, review counts
- Uluwatu market reference points

REQUIRES YOUR DATA

- Realized rate after promotions and discounts
- Actual occupancy and RevPAR by unit
- Whether a closed date is booked or blocked
- Real commission paid to each platform
- Cancellations, no-shows and length of stay
- Owner blocks and out-of-order nights

> One report closes all of it: monthly, per unit, last twelve months — nights sold, revenue, platform commission, channel. From that, realized rate, occupancy, RevPAR and channel mix calculate themselves, with no assumptions from us.

Where the growth actually comes from.

Three levers, in order of size and speed. Rate work first, channels second, new demand third.

1

Occupancy

MONTHS 1–6

Full inventory coverage, listing quality, Airbnb rebuilt, orphan nights released. The largest and cheapest lever available.

2

Rate architecture

MONTHS 1–9

Weekend premium, seasonal spread widened, depth-based ladder, minimum stay on peaks. Tested against RevPAR, never headline rate.

3

Channel mix

MONTHS 3–18

Agent portfolio at 10% instead of 20% platform commission, then direct bookings and repeat guests. Same revenue, more of it reaching you.

OCCUPANCY ACROSS 30 VILLAS	NET REVENUE PER MONTH	CHANGE
50% — today	1.49 bn IDR	—
60%	1.79 bn	+20%
70%	2.09 bn	+40%

> Two billion is reachable at 70% occupancy without raising the headline rate at all. Three billion needs inventory — Palms and Urbana — not marketing.

FIRST 90 DAYS

Fix, rebuild, then prove.

Everything in the first thirty days happens inside systems you already pay for.

DAYS 1–30

Fix the rate sheet

- Weekend premium across the full calendar
- Seasonal spread widened toward market
- Depth-based rate ladder
- Orphan-night exception rule
- Minimum stay on peak dates
- Low season tested at −10% midweek
- Full inventory coverage check

DAYS 31–60

Rebuild distribution

- Airbnb listings rebuilt and synced
- Rate parity across all channels
- Titles and photography standardised
- Agent contracts, quotas, seasonal terms
- Website and direct path live
- Google Business Profile claimed

DAYS 61–90

Prove it

- RevPAR against baseline
- Forward booking depth
- Channel mix and average commission
- Airbnb from zero to measurable
- Guest rating movement
- Decision: continue, extend or stop

No advertising budget is required in the first thirty days. Nothing in this column depends on new demand.

Who does what.

Your team keeps the property. We take the commercial layer above it.

Fadjri D. Roesman, CSMH

SALES, REVENUE AND DISTRIBUTION

26 years in commercial hotel roles. Director of Sales & Marketing at Le Meridien Jakarta, Sheraton Bandara, Westin Resort Nusa Dua, Ayodya Resort Bali and The Sultan. Earlier at Mandarin Oriental Jakarta, Rosewood Dharmawangsa and InterContinental Borobudur.

General Manager and Cluster GM since 2017. Starwood regional sales trainer for South East Asia. Secretary General, Indonesia Hotel & General Manager Association.

Selena Nigmatullaeva

BRAND & DIGITAL SYSTEMS ARCHITECT

The prototype site you are looking at was built before this meeting, at our cost.

- Brand strategy and positioning
- SEO and digital visibility
- Website and direct-booking architecture
- CRM and guest-journey automation
- Analytics and system integrations

Founder & Developer, KORA Food Hall, Ubud — 1,800 m², 12 food concepts, 400 seats. 80% built, opening December 2026. Visit any time. Founder, Selena Systems & OtherBali.com

	OWNER'S TEAM	FADJRI	SELENA
Daily operations, staff, housekeeping, maintenance	Accountable	—	—
Pricing, channels, agents, OTA relationships	Data	Accountable	KPI framework
Brand, website, SEO, CRM, analytics	—	Input	Accountable
Owner reporting and P&L	Accountable	Commercial input	Data infrastructure

Terms, open decisions and the next step.

We are paid on what actually reaches your account, after every platform commission.

DECISION	PROPOSED	TO CONFIRM TOGETHER
Fee base	Net revenue after all platform commissions	what your bank actually receives
Baseline	Your actual last 12 months, month by month	from the PMS export, not an estimate
Fee on baseline	To confirm %	the rate you keep paying on today's business
Fee on growth	To confirm %	only on revenue above the matching month
New inventory	Baseline recalculated when units are added	Palms and Urbana enter at pool average
Advertising	Separate line, monthly cap you approve	reported at cost, zero markup
Assets at contract end	Property keeps domain, site, guest data	written into the agreement

TODAY

Agree priorities and scope

THIS WEEK

12-month export, per unit

DAY 30

Rate sheet rebuilt, Airbnb live

TO CONFIRM BEFORE MEETING

Presenter phone · business email · date of the second meeting

Anjuna Bay does not have a demand problem.

It has a pricing, distribution and channel problem — and all four things we found this morning are fixed from inside systems you already pay for.

01

Rate that moves

Weekends, seasons and booking depth priced properly.

02

Channels that work

Airbnb rebuilt, parity restored, agents under contract.

03

Nights that sell

Orphan nights released instead of quietly disappearing.

04

Demand you own

Website, guest database and repeat bookings in your name.
